

OS LAB 1:

14/6/23

OS Lab-1 :-

Q) Write a C or C++ program pass matrices as parameters in all the programs

- 1) Matrix addition and Subtraction
- 2) Matrix Multiplication
- 3) Sum of Principal Diagonal and Non Principal Diagonal elements
- 4) Sum of rows and columns
- 5) Print transpose of the given matrix.
- 6) Check if a given matrix is Symmetric or not

Program:-

```
#include <stdio.h>
```

```
#include <stdlib.h>
```

```
void sum(int matA[50][50], int matB[50][50], int rows, int cols)
```

```
{  
    int matC[50][50];
```

```
    for (int i=0; i<rows; i++)
```

```
    {  
        for (int j=0; j<cols; j++)
```

```
        {  
            matC[i][j] = matA[i][j] + matB[i][j];
```

```
        }
```

```
    }
```

```
    for (int i=0; i<rows; i++)
```

```
    {  
        for (int j=0; j<cols; j++)
```

```
        {  
            printf("%d\t", matC[i][j]);
```

```
        }
```

```
        printf("\n");
```

```
    }
```

```

void disp (int mat A[50][50], int mat B[50][50], int rows, int cols)
{
    int mat C[50][50];
    for (int i=0; i<rows; i++)
    {
        for (int j=0; j<cols; j++)
        {
            printf("%d\t", matC[i][j]);
        }
        printf("\n");
    }
}

```

```

void mul (int a[50][50], int b[50][50], int v, int c)

```

```

{
    int mat C[50][50];

    for (int i=0; i<v; i++)
    {
        for (int j=0; j<c; j++)
        {

DIP:-

Matrix A:- 0 1 2
3 4 5
6 7 8

Matrix B:- 1 2 3
3 4 5
5 6 7

Sum:- 1 3 5
6 8 10
11 13 15

Difference:- -1 -1 -1
0 0 0
1 1 1

Multiplication:- 13 16 19
40 52 64
67 70 109

Sum of Diagonal: 12
Sum of Non principal diagonal: 12

Sum of rows and columns:-

	0	1	2	3
0	3	4	5	12
1	6	7	4	21
2	9	12	15	0

Transpose:-

0	3	6
1	4	7
2	5	8

Matrix A is not symmetric.

~~21/6/23~~

Output:

```
MATRIX A:
0      1      2
0      1      2
0      1      2
