“JnanaSangama”, Belgaum -590014, Karnataka.

LAB REPORT

on

Big Data and Analytics Lab

Submitted by

G Sai Vikrant (1BM21CS061)

in partial fulfillment for the award of the degree of
BACHELOR OF ENGINEERING
in
COMPUTER SCIENCE AND ENGINEERING

B.M.S. COLLEGE OF ENGINEERING

(Autonomous Institution under VTU)

BENGALURU-560019

Feb-2024 to July-2024

B. M. S. College of Engineering,
Bull Temple Road, Bangalore 560019
(Affiliated To Visvesvaraya Technological University, Belgaum)
Department of Computer Science and Engineering

CERTIFICATE

This is to certify that the Lab work entitled “Big Data Analytics Lab” carried out by **G Sai Vikrant (1BM21CS061)**, who is a bonafide student of **B. M. S. College of Engineering**. It is in partial fulfillment for the award of **Bachelor of Engineering in Computer Science and Engineering** of the Visvesvaraya Technological University, Belgaum during the year 2024. The Lab report has been approved as it satisfies the academic requirements in respect of a **Big Data and Analytics - (22CS6PEBDA)** work prescribed for the said degree.

Prof. Rekha GS
Assistant Professor
Department of CSE
BMSCE, Bengaluru

Dr. Jyothi S Nayak
Professor and Head
Department of CSE
BMSCE, Bengaluru

Index Sheet

Sl. No.	Experiment Title	Page No.
1.	MongoDB CRUD Operations	4
2.	Cassandra Employee	9
3.	Cassandra Library	11
4.	Hadoop Installation	13
5.	Hadoop Commands	14
6.	Hadoop Word Count	16
7.	Map Reduce Programs	20
8.	Map Reduce Sort	23

Course Outcome

--	--

Lab 1

Perform the following DB operations using MongoDB

Create a collection by the name `blogPosts` and it has 3 fields `id`, `title` and `comments`.

In the collection the `comments` field is an array which consists of user details. Each collection consists of two user details inside the `comments` array- `user` name and `text`

```
db.createCollection("blogPosts")
```

```
Atlas atlas-axcx6s-shard-0 [primary] lab3> db.createCollection("blogPosts")
{ ok: 1 }
Atlas atlas-axcx6s-shard-0 [primary] lab3> show collections
blogPosts
Atlas atlas-axcx6s-shard-0 [primary] lab3> db.blogPosts.insertOne({
...   id: 1,
...   title: "Sample Title",
...   comments: [
...     { user: "User1", text: "Comment1" }
...   ]
... })
{
  acknowledged: true,
  insertedId: ObjectId("660bc8a8c0cf4e885fcbb2e3")
}
```

Demonstrate the following

1. Adding an element into array

```
db.blogPosts.insertOne({
  id: 1,
  title: "Sample Title",
  comments: [
    { user: "User1", text: "Comment1" }
  ]
})
```

(Similarly, Insert 4 ids)

```
}
Atlas atlas-57yq38-shard-0 [primary] test> db.blogPosts.find()
[
  {
    _id: ObjectId('660bcdd48adf462691a26f41'),
    id: 1,
    title: 'Sample Title',
    comments: [ { user: 'User1', text: 'Comment1' } ]
  }
]
```

```
Atlas atlas-axcx6s-shard-0 [primary] lab3> db.blogPosts.find()
[
  {
    _id: ObjectId("660bc8a8c0cf4e885fcbb2e3"),
    id: 1,
    title: 'Sample Title',
    comments: [ { user: 'User1', text: 'Comment1' } ]
  },
  {
    _id: ObjectId("660bc98ac0cf4e885fcbb2e4"),
    id: 2,
    title: 'Title2',
    comments: [ { user: 'User2', text: 'Comment2' } ]
  },
  {
    _id: ObjectId("660bc9cdc0cf4e885fcbb2e5"),
    id: 3,
    title: 'Title3',
    comments: [ { user: 'User3', text: 'Comment3' } ]
  },
  {
    _id: ObjectId("660bc9dec0cf4e885fcbb2e6"),
    id: 4,
    title: 'Title4',
    comments: [ { user: 'User4', text: 'Comment4' } ]
  }
]
```

2. Display second element

```
db.blogPosts.find().skip(1).limit(1)
```

```
Atlas atlas-axcx6s-shard-0 [primary] lab3> db.blogPosts.find().skip(1).limit(1)
[
  {
    _id: ObjectId("660bc98ac0cf4e885fcbb2e4"),
    id: 2,
    title: 'Title2',
    comments: [ { user: 'User2', text: 'Comment2' } ]
  }
]
```

3. Display size of the array

```
db.blogPosts.aggregate([
  { $project: { commentsCount: { $size: "$comments" } } }
])
```

```
Atlas atlas-axcx6s-shard-0 [primary] lab3> db.blogPosts.aggregate([
...   { $project: { commentsCount: { $size: "$comments" } } }
... ])
[
  { _id: ObjectId("660bc8a8c0cf4e885fcbb2e3"), commentsCount: 1 },
  { _id: ObjectId("660bc98ac0cf4e885fcbb2e4"), commentsCount: 1 },
  { _id: ObjectId("660bc9cdc0cf4e885fcbb2e5"), commentsCount: 1 },
  { _id: ObjectId("660bc9dec0cf4e885fcbb2e6"), commentsCount: 2 }
]
```

4. Display first two elements of the array

```
db.blogPosts.aggregate([
  { $project: { firstTwoComments: { $slice: ["$comments", 2] } } }
])
```

```

Atlas atlas-axcx6s-shard-0 [primary] lab3> db.blogPosts.aggregate([
...   { $project: { firstTwoComments: { $slice: ["$comments", 2] } } }
... ])
[
  {
    _id: ObjectId("660bc8a8c0cf4e885fcbb2e3"),
    firstTwoComments: [ { user: 'User1', text: 'Comment1' } ]
  },
  {
    _id: ObjectId("660bc98ac0cf4e885fcbb2e4"),
    firstTwoComments: [ { user: 'User2', text: 'Comment2' } ]
  },
  {
    _id: ObjectId("660bc9cdc0cf4e885fcbb2e5"),
    firstTwoComments: [ { user: 'User3', text: 'Comment3' } ]
  },
  {
    _id: ObjectId("660bc9dec0cf4e885fcbb2e6"),
    firstTwoComments: [
      { user: 'User4', text: 'Comment4' },
      [ { user: 'NewUser', text: 'NewComment' } ]
    ]
  }
]

```

5. Update the document with id 4 and replace the element present in 1st index position of the array with another array

```

db.blogPosts.updateOne(
  { id: 4 },
  { $set: { "comments.1": [{ user: "NewUser", text: "NewComment" }] } }
)

```

```

Atlas atlas-axcx6s-shard-0 [primary] lab3> db.blogPosts.updateOne( { id: 4 }, { $set: { "comments.1": [{ user: "NewUser",
text: "NewComment" }] } } )
{
  acknowledged: true,
  insertedId: null,
  matchedCount: 1,
  modifiedCount: 1,
  upsertedCount: 0
}

```

```
Atlas atlas-axcx6s-shard-0 [primary] lab3> db.blogPosts.find()
[
  {
    _id: ObjectId("660bc8a8c0cf4e885fcbb2e3"),
    id: 1,
    title: 'Sample Title',
    comments: [ { user: 'User1', text: 'Comment1' } ]
  },
  {
    _id: ObjectId("660bc98ac0cf4e885fcbb2e4"),
    id: 2,
    title: 'Title2',
    comments: [ { user: 'User2', text: 'Comment2' } ]
  },
  {
    _id: ObjectId("660bc9cdc0cf4e885fcbb2e5"),
    id: 3,
    title: 'Title3',
    comments: [ { user: 'User3', text: 'Comment3' } ]
  },
  {
    _id: ObjectId("660bc9dec0cf4e885fcbb2e6"),
    id: 4,
    title: 'Title4',
    comments: [
      { user: 'User4', text: 'Comment4' },
      [ { user: 'NewUser', text: 'NewComment' } ]
    ]
  }
]
```

Lab 2

Perform the following DB operations using Cassandra.

1. Create a keyspace by name Employee

```
create keyspace Employee with replication = {'class':'SimpleStrategy',  
'replication_factor':1};  
use Employee;
```

2. Create a column family by name Employee-Info with attributes, Emp_Id Primary Key, Emp_Name, Designation, Date_of_Joining, Salary, Dept_Name

```
create table EmployeeInfo(Emp_Id int primary key, Emp_Name text, Designation  
text, Date_of_Joining timestamp, Salary double, Dept_Name text);
```

3. Insert the values into the table in batch

```
begin batch
```

```
    ... insert into employeeinfo (emp_id, date_of_joining, dept_name,  
designations, emp_name, salary)
```

```
    ... values (121, '2024-03-25', 'KSC', 'Intern', 'Arvind', 0)
```

```
    ... insert into employeeinfo (emp_id, date_of_joining, dept_name,  
designations, emp_name, salary)
```

```
    ... values (122, '2024-06-01', 'KSC', 'Intern', 'Aravind', 35000)
```

```
    ... apply batch;
```

emp_id	date_of_joining	dept_name	designation	emp_name	salary
122	2024-05-31 18:30:00.000000+0000	KSC	Intern	Aravind	35000
121	2024-03-24 18:30:00.000000+0000	KSC	Intern	Arvind	0

4. Update Employee name and Department of Emp-Id 121

update employeeinfo set emp_name='Arvind Ashok', dept_name='Security' where emp_id=121;

emp_id	date_of_joining	dept_name	designation	emp_name	salary
122	2024-05-31 18:30:00.000000+0000	KSC	Intern	Aravind	35000
121	2024-03-24 18:30:00.000000+0000	Security	Intern	Arvind Ashok	0

5. Sort the details of Employee records based on salary

cqlsh:employee> select * from Employee_information where emp_id in (1,2,3)
order by Salary;

6. Alter the schema of the table Employee_Info to add a column Projects which stores a set of Projects done by the corresponding Employee.

cqlsh:employee> alter table employee_info add projects set<text>;

7. Update the altered table to add project names.

cqlsh:employee> update employee_info set
projects=projects+{'project1','project2','project3'} where emp_id=1;

8. Create a TTL of 15 seconds to display the values of Employees.

begin batch

... insert into Employee_Info(Emp_id,Emp_name,Date_of_Joining,Salary,Dept_Name) values(1,'Khushil','2021-04-23',50000,'CSE') using TTL 15

... apply batch

Lab 3

1. Create a key space by name Library

```
create keyspace Library with replication = {'class':'SimpleStrategy',  
      'replication_factor':1};
```

2. Create a column family by name Library-Info with attributes Stud_Id Primary Key, Counter_value of type Counter,

```
create table Library_info(Stud_id int, COUNTER_value counter, Stud_name  
      varchar, Book_name varchar, Book_id int, doi date, primary key (Stud_id,  
      Stud_name, Book_id, Book_id, doi));
```

3. Insert the values into the table in batch

```
update Library_info set Counter_value = Counter_value + 1 where Stud_id =  
      112 and Stud_name = 'Arvind' and 'Book_id'='123' and 'doi'='2024-06-09'
```

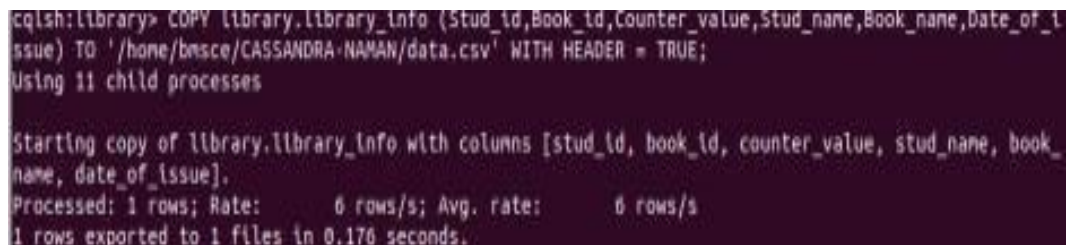

4. Display the details of the table created and increase the value of the counter

```
update library_info set Counter_value = Counter_value + 1 where  
      Stud_id=112 and Stud_name='Arvind' and Book_name='abc' and  
      Book_id='123' and doi='2024-05-01';
```

5. Write a query to show that a student with id 112 has taken a book “BDA” 2 times.

```
select counter_value as borrow_count from Library_info where Stud_id=112  
      and Book_id=123
```

6. Export the created column to a csv file

```
cqlsh:library> COPY library.library_info (Stud_id,Book_id,Counter_value,Stud_name,Book_name,Date_of_1  
      issue) TO '/home/bmsce/CASSANDRA-NAMAN/data.csv' WITH HEADER = TRUE;  
      Using 11 child processes  
  
      Starting copy of library.library_info with columns [stud_id, book_id, counter_value, stud_name, book_  
      name, date_of_issue].  
      Processed: 1 rows; Rate:      6 rows/s; Avg. rate:      6 rows/s  
      1 rows exported to 1 files in 0.176 seconds.
```

7. Import a given csv dataset from local file system into Cassandra column family

```
cqlsh:library> COPY library.library_info (stud_id,book_id,counter_value,stud_name,book_name,date_of_issue) FROM '/home/bmsce/CASSANDRA-NAMAN/data.csv' WITH HEADER = TRUE;
Using 11 child processes

Starting copy of library.library_info with columns [stud_id, book_id, counter_value, stud_name, book_name, date_of_issue].
Processed: 1 rows; Rate:      2 rows/s; Avg. rate:      3 rows/s
1 rows imported from 1 files in 0.379 seconds (0 skipped).
```

Lab 6

Word Count

Implement WordCount Program on Hadoop framework

WCMapper Java Class file.

```
// Importing libraries import java.io.IOException; import
org.apache.hadoop.io.IntWritable; import org.apache.hadoop.io.LongWritable;
import org.apache.hadoop.io.Text;

import org.apache.hadoop.mapred.MapReduceBase; import
org.apache.hadoop.mapred.Mapper; import
org.apache.hadoop.mapred.OutputCollector; import
org.apache.hadoop.mapred.Reporter;

public class WCMapper extends MapReduceBase implements
Mapper<LongWritable,
Text, Text, IntWritable> {

// Map function

public void map(LongWritable key, Text value, OutputCollector<Text, IntWritable>
output, Reporter rep) throws IOException
{
String line = value.toString();

// Splitting the line on spaces for (String word : line.split(" "))
{
if (word.length() > 0)
{
```

```
output.collect(new Text(word), new IntWritable(1));  
}    }    }}
```

Reducer Code

```
// Importing libraries import java.io.IOException; import java.util.Iterator; import  
org.apache.hadoop.io.IntWritable; import
```

```
org.apache.hadoop.io.Text; import org.apache.hadoop.mapred.MapReduceBase;  
import org.apache.hadoop.mapred.OutputCollector; import  
org.apache.hadoop.mapred.Reducer; import  
org.apache.hadoop.mapred.Reporter;
```

```
public class WCReducer extends MapReduceBase implements Reducer<Text,  
IntWritable, Text, IntWritable> {
```

```
// Reduce function public void reduce(Text key, Iterator<IntWritable> value,  
OutputCollector<Text, IntWritable> output, Reporter rep) throws IOException  
{
```

```
int count = 0;
```

```
// Counting the frequency of each words while (value.hasNext())  
{  
IntWritable i = value.next(); count += i.get();  
}
```

```
output.collect(key, new IntWritable(count));  
}  
}
```

Driver Code:

```
// Importing libraries import java.io.IOException; import  
org.apache.hadoop.conf.Configured; import org.apache.hadoop.fs.Path; import  
org.apache.hadoop.io.IntWritable; import  
  
org.apache.hadoop.io.Text; import org.apache.hadoop.mapred.FileInputFormat;  
import org.apache.hadoop.mapred.FileOutputFormat; import  
org.apache.hadoop.mapred.JobClient; import  
org.apache.hadoop.mapred.JobConf; import org.apache.hadoop.util.Tool; import  
org.apache.hadoop.util.ToolRunner;  
  
public class WCDriver extends Configured implements Tool { public int run(String  
args[]) throws IOException  
{  
if (args.length < 2)  
{  
System.out.println("Please give valid inputs"); return -1;  
}  
  
JobConf conf = new JobConf(WCDriver.class); FileInputFormat.setInputPaths(conf,  
new Path(args[0]));  
  
FileOutputFormat.setOutputPath(conf, new Path(args[1]));  
  
conf.setMapperClass(WCMapper.class); conf.setReducerClass(WCReducer.class);  
conf.setMapOutputKeyClass(Text.class);
```

```
conf.setMapOutputValueClass(IntWritable.class);  
conf.setOutputKeyClass(Text.class); conf.setOutputValueClass(IntWritable.class);  
JobClient.runJob(conf); return 0;  
}
```

```
// Main Method
```

```
public static void main(String args[]) throws Exception  
{  
  
int exitCode = ToolRunner.run(new WCDriver(), args);  
System.out.println(exitCode);  
}
```

Lab 7

Create a Map Reduce program to

a) find average temperature for each year from NCDC data set.

b) find the mean max temperature for every month

Driver

```
package temp;
```

```
import org.apache.hadoop.fs.Path; import org.apache.hadoop.io.IntWritable;
import org.apache.hadoop.io.Text; import org.apache.hadoop.mapreduce.Job;
import org.apache.hadoop.mapreduce.lib.input.FileInputFormat; import
org.apache.hadoop.mapreduce.lib.output.FileOutputFormat;
```

```
public class AverageDriver {
    public static void main(String[] args) throws Exception {
        if (args.length != 2) {
            System.err.println("Please Enter the input and output parameters");
            System.exit(-1);
        }
        Job job = new Job(); job.setJarByClass(AverageDriver.class); job.setJobName("Max
        temperature");
        FileInputFormat.addInputPath(job, new Path(args[0]));
        FileOutputFormat.setOutputPath(job, new Path(args[1]));
        job.setMapperClass(AverageMapper.class);
        job.setReducerClass(AverageReducer.class); job.setOutputKeyClass(Text.class);
        job.setOutputValueClass(IntWritable.class);
        System.exit(job.waitForCompletion(true) ? 0 : 1);  }
    }
```

Mapper

```
package temp;
```

```
import java.io.IOException; import org.apache.hadoop.io.IntWritable; import  
org.apache.hadoop.io.LongWritable; import org.apache.hadoop.io.Text; import  
org.apache.hadoop.mapreduce.Mapper; public class AverageMapper extends
```

```
Mapper<LongWritable, Text, Text, IntWritable> {    public static final int MISSING =  
9999;
```

```
public void map(LongWritable key, Text value, Mapper<LongWritable, Text, Text,  
IntWritable>.Context context) throws IOException, InterruptedException {    int  
temperature;
```

```
String line = value.toString();    String year = line.substring(15, 19);    if  
(line.charAt(87) == '+') { temperature = Integer.parseInt(line.substring(88, 92));
```

```
    } else {
```

```
        temperature = Integer.parseInt(line.substring(87, 92));
```

```
    }
```

```
String quality = line.substring(92, 93);
```

```
if (temperature != 9999 && quality.matches("[01459]")) context.write(new  
Text(year), new
```

```
IntWritable(temperature));
```

```
}
```

```
}
```

Reducer

```
package temp;
```

```
import java.io.IOException; import org.apache.hadoop.io.IntWritable; import  
org.apache.hadoop.io.Text;
```

```
import org.apache.hadoop.mapreduce.Reducer;
```

```
public class AverageReducer extends Reducer<Text, IntWritable, Text, IntWritable>  
{    public void reduce(Text key, Iterable<IntWritable> values, Reducer<Text,  
IntWritable, Text, IntWritable>.Context context) throws IOException,  
InterruptedException {    int max_temp = 0; int count = 0;
```

```
for (IntWritable value : values)
```

```
{    max_temp += value.get(); count++;    }
```

```
context.write(key, new IntWritable(max_temp / count));
```

```
}
```

```
}
```

Lab 8

For a given Text file, Create a Map Reduce program to sort the content in an alphabetic order listing only top 10 maximum occurrences of words.

Mapper.py

```
import sys

# Read input from STDIN
for line in sys.stdin:

    # Remove leading and trailing whitespace
    line = line.strip()

    # Split the line into words
    words = line.split()

    # Emit the word along with a count of 1
    for word in words:
        print(f"{word}\t1")
```

Reducer.py

```
import sys

from collections import defaultdict

word_counts = defaultdict(int)

# Read input from STDIN
for line in sys.stdin:

    # Remove leading and trailing whitespace
    line = line.strip()

    # Parse the input we got from mapper.py
    word, count = line.split('\t', 1)
```

```
# Convert count from string to int
try:
    count = int(count)
except ValueError:
    continue

# Increment word count
word_counts[word] += count

# Sort words alphabetically
sorted_words = sorted(word_counts.items(), key=lambda x: x[0])

# Emit the top 10 words with the highest counts
for word, count in sorted(sorted_words, key=lambda x: -x[1])[:10]:
    print(f"{word}\t{count}")
```
